Portable devices are primarily battery powered devices with base computing resources in the form of a processor, memory, storage, and network access. Examples include, but are not limited to, mobile phones, tablets, and laptops. Mobile Device is a subset of Portable Device.
- m. "Portable Media" means any machine readable media that may routinely be stored or moved independently of computing devices. Examples include magnetic tapes, optical discs (CDs or DVDs), flash memory (thumb drive) devices, external hard drives, and internal hard drives that have been removed from a computing device.
- n. "Secure Area" means an area to which only authorized representatives of the entity possessing the Confidential Information have access, and access is controlled through use of a key, card key, combination lock, or comparable mechanism. Secure Areas may include buildings, rooms or locked storage containers (such as a filing cabinet or desk drawer) within

a room, as long as access to the Confidential Information is not available to unauthorized personnel. In otherwise Secure Areas, such as an office with restricted access, the Data must be secured in such a way as to prevent access by non-authorized staff such as janitorial or facility security staff, when authorized Contractor staff are not present to ensure that non-authorized staff cannot access it.

- o. "Trusted Network" means a network operated and maintained by the Contractor, which includes security controls sufficient to protect DOC Data on that network. Controls would include a firewall between any other networks, access control lists on networking devices such as routers and switches, and other such mechanisms which protect the confidentiality, integrity, and availability of the Data.
- p. "Unique User ID" means a string of characters that identifies a specific user and which, in conjunction with a password, passphrase or other mechanism, authenticates a user to an information system.
- q. "Biometric identifier" means any information, regardless of how it is captured, converted, stored, or shared, based on an individual's retina or iris scan, fingerprint, voiceprint, DNA, or scan of hand or face geometry, except when such information is derived from:

- (i) Writing samples, written signatures, photographs, human biological samples used for valid scientific testing or screening, demographic data, tattoo descriptions, or physical descriptions such as height, weight, hair color, or eye color;

- (ii) Donated organ tissues or parts, or blood or serum stored on behalf of recipients or potential recipients of living or cadaveric transplants and obtained or stored by a federally designated organ procurement agency;

- (iii) Information captured from a patient in a health care setting or information collected, used, or stored for health care treatment, payment, or operations under the federal health insurance portability and accountability act of 1996; or

- (iv) X-ray, roentgen process, computed tomography, magnetic resonance imaging (MRI), positron emission tomography (PET) scan, mammography, or other image or film of the human anatomy used to diagnose, develop a prognosis for, or treat an illness or other medical condition or to further validate scientific testing or screening.

2. **Authority.** The security requirements described in this document reflect the applicable requirements of Standard 141.10 (<https://ocio.wa.gov/policies>) of the Office of the Chief Information Officer for the state of Washington, [WA DOC Policy 280.310 – Information Technology Security](#); [WA DOC Policy 280.515 – Data Classification and Sharing](#); the terms and conditions set forth in this Agreement; and all applicable state and federal laws in its treatment of WA DOC Data

3. **Administrative Controls.** The Contractor must have the following controls in place:

- a. A documented security policy governing the secure use of its computer network and systems, and which defines sanctions that may be applied to Contractor staff for violating that policy.
- b. Any data center security controls must meet or exceed those expected by the Federal

Information Security Management Act (FISMA) for low to moderate impact systems as described in FIPS 199 and 200, and in the most current release of National Institute of Standards and Technology (NIST) Special Publications SP800- 53, including all other referenced NIST publications.

- c. Contractor warrants that all data collected, processed, routed, and/or stored by or through the service, or third-party service providers, remains at all times within the United States.
- d. If the Data shared under this agreement is classified as Category 4, the Contractor must be aware of and compliant with the applicable legal or regulatory requirements for that Category 4 Data.
- e. If Confidential Information shared under this agreement is classified as Category 4, the Contractor must have a documented risk assessment for the system(s) housing the Category 4 Data.

4. Authorization, Authentication, and Access. In order to ensure that access to the Data is limited to authorized staff, the Contractor must:

- a. Have documented policies and procedures governing access to systems with the shared Data.
- b. Restrict access through administrative, physical, and technical controls to authorized staff.
- c. Ensure that user accounts are unique and that any given user account logon ID and password combination is known only to the one employee to whom that account is assigned. For purposes of non-repudiation, it must always be possible to determine which employee performed a given action on a system housing the Data based solely on the logon ID used to perform the action.
- d. Ensure that only authorized users are capable of accessing the Data.
- e. Ensure that an employee's access to the Data is removed immediately:
 - (1) Upon suspected compromise of the user credentials.
 - (2) When their employment, or the contract under which the Data is made available to them, is terminated.
 - (3) When they no longer need access to the Data to fulfill the requirements of the contract.
- f. Have a process to periodically review and verify that only authorized users have access to systems containing DOC Confidential Information.
- g. When accessing the Data from within the Contractor's network (the Data stays within the Contractor's network at all times), enforce password and logon requirements for users within the Contractor's network, including:
 - (1) A minimum length of 8 characters, and containing at least three of the following character classes: uppercase letters, lowercase letters, numerals, and special characters such as an asterisk, ampersand, or exclamation point.

- (2) That a password does not contain a user's name, logon ID, or any form of their full name.
 - (3) That a password does not consist of a single dictionary word. A password may be formed as a passphrase which consists of multiple dictionary words.
 - (4) That passwords are significantly different from the previous four passwords. Passwords that increment by simply adding a number are not considered significantly different.
- h. When accessing Confidential Information from an external location (the Data will traverse the Internet or otherwise travel outside the Contractor's network), mitigate risk and enforce password and logon requirements for users by employing measures including:
- (1) Ensuring mitigations applied to the system don't allow end-user modification.
 - (2) Not allowing the use of dial-up connections.
 - (3) Using industry standard protocols and solutions for remote access. Examples would include RADIUS and Citrix.
 - (4) Encrypting all remote access traffic from the external workstation to Trusted Network or to a component within the Trusted Network networks (using key lengths of 128 bits or greater) Algorithm modules validated by the National Institute of Standards and Technology (NIST) [Cryptographic Module Validation Program \(CMVP\)](#) are required. The traffic must be encrypted at all times while traversing any network, including the Internet, which is not a Trusted Network.
 - (5) Ensuring that the remote access system prompts for re-authentication or performs automated session termination after no more than 20 minutes of inactivity.
 - (6) Ensuring use of Multi-factor Authentication to connect from the external end point to the internal end point. Authentication mechanisms must meet or exceed those described in the most recent version of NIST SP 800-63 for information requiring assurance level 3 or higher. One of the authentication factors should be provided by a device separate from the computer gaining access.
 - (7) Ensuring all system and service accounts use Enterprise Active Directory or a similar centralized authentication and authorization mechanism. If authentication methods such as SQL authentication are required by the system, Contractor uses credentials secured during transmission through encrypted sessions such as TLS1.2 (or greater) or IPsec, and in storage using a secure hash method validated by the National Institute of Standards and Technology (NIST). Within 72 hours of a request from DOC, Contractor must provide documentation showing how the credentials are secured during all transmissions using encrypted sessions such as TLS or IPsec, and in storage using a secure hash method validated by the National Institute of Standards and Technology (NIST).
- i. Passwords or PIN codes may meet a lesser standard if used in conjunction with another authentication mechanism, such as a biometric (fingerprint, face recognition, iris scan) or token (software, hardware, smart card, etc.) in that case:

- (1) The PIN or password must be at least 5 letters or numbers when used in conjunction with at least one other authentication factor
 - (2) Must not be comprised of all the same letter or number (11111, 22222, aaaaa, would not be acceptable)
 - (3) Must not contain a “run” of three or more consecutive numbers (12398, 98743 would not be acceptable)
- j. If the contract specifically allows for the storage of Confidential Information on a Mobile Device, passcodes used on the device must:
- (1) Be a minimum of six alphanumeric characters.
 - (2) Contain at least three unique character classes (upper case, lower case, letter, number).
 - (3) Not contain more than a three consecutive character run. Passcodes consisting of 12345, or abcd12 would not be acceptable.
- k. Render the device unusable after a maximum of 10 failed logon attempts.
- l. Ensure the system/service supports single sign-on for state government employees, and external users by integrating the system's authentication mechanisms with the Washington State Enterprise Active Directory and Secure Authentication Gateways (post listeners are typically used for processing the gateway host headers).
- m. Utilize application authentication controls that are consistent with those described in the most recent version of NIST SP 800-63 for information requiring assurance level 2 or higher.

5. Protection of Data. The Contractor agrees to store Data on one or more of the following media and protect the Data as described:

- a. **Hard disk drives.** For Data stored on local workstation hard disks, access to the Data will be restricted to Authorized User(s) by requiring logon to the local workstation using a Unique User ID and Hardened Password or other authentication mechanisms which provide equal or greater security, such as biometrics or smart cards.
- b. **Network server disks.** For Data stored on hard disks mounted on network servers and made available through shared folders, access to the Data will be restricted to Authorized Users through the use of access control lists which will grant access only after the Authorized User has authenticated to the network using a Unique User ID and Hardened Password or other authentication mechanisms which provide equal or greater security, such as biometrics or smart cards. Data on disks mounted to such servers must be located in an area which is accessible only to authorized personnel, with access controlled through use of a key, card key, combination lock, or comparable mechanism.

For DOC Confidential Information stored on these disks, deleting unneeded Data is sufficient as long as the disks remain in a Secure Area and otherwise meet the requirements listed in the above paragraph. Destruction of the Data, as outlined below in Section 8 Data Disposition, may be deferred until the disks are retired, replaced, or otherwise taken out of the Secure Area.

- c. **Optical discs (CDs or DVDs) in local workstation optical disc drives.** Data provided by DOC on optical discs which will be used in local workstation optical disc drives and which will not be transported out of a Secure Area. When not in use for the contracted purpose, such discs must be Stored in a Secure Area. Workstations which access DOC Data on optical discs must be located in an area which is accessible only to authorized personnel, with access controlled through use of a key, card key, combination lock, or comparable mechanism.
- d. **Optical discs (CDs or DVDs) in drives or jukeboxes attached to servers.** Data provided by DOC on optical discs which will be attached to network servers and which will not be transported out of a Secure Area. Access to Data on these discs will be restricted to Authorized Users through the use of access control lists which will grant access only after the Authorized User has authenticated to the network using a Unique User ID and Hardened Password or other authentication mechanisms which provide equal or greater security, such as biometrics or smart cards. Data on discs attached to such servers must be located in an area which is accessible only to authorized personnel, with access controlled through use of a key, card key, combination lock, or comparable mechanism.
- e. **Paper documents.** Any paper records must be protected by storing the records in a Secure Area which is only accessible to authorized personnel. When not in use, such records must be stored in a Secure Area.
- f. **Remote Access.** Access to and use of the Data over the State Governmental Network (SGN) or Secure Access Washington (SAW) will be controlled by DOC staff who will issue authentication credentials (e.g. a Unique User ID and Hardened Password) to Authorized Users on Contractor's staff. Contractor will notify DOC staff immediately whenever an Authorized User in possession of such credentials is terminated or otherwise leaves the employ of the Contractor, and whenever an Authorized User's duties change such that the Authorized User no longer requires access to perform work for this Contract.
- g. **Data storage on portable devices or media.**
 - (1) Except where otherwise specified herein, DOC Data shall not be stored by the Contractor on portable devices or media unless specifically authorized within the terms and conditions of the Contract. If so authorized, the Data shall be given the following protections:
 - (a) Encrypt the Data.
 - (b) Control access to devices with a Unique User ID and Hardened Password or stronger authentication method such as a physical token or biometrics.
 - (c) Manually lock devices whenever they are left unattended and set devices to lock automatically after a period of inactivity, if this feature is available. Maximum period of inactivity is 20 minutes.
 - (d) Apply administrative and physical security controls to Portable Devices and Portable Media by:
 - i. Keeping them in a Secure Area when not in use,

- ii. Using check-in/check-out procedures when they are shared, and
 - iii. Taking frequent inventories.
- (2) When being transported outside of a Secure Area, Portable Devices and Portable Media with DOC Confidential Information must be under the physical control of Contractor staff with authorization to access the Data, even if the Data is encrypted.

h. Data stored for backup purposes.

- (1) DOC Confidential Information may be stored on Portable Media as part of a Contractor's existing, documented backup process for business continuity or disaster recovery purposes. Such storage is authorized until such time as that media would be reused during the course of normal backup operations. If backup media is retired while DOC Confidential Information still exists upon it, such media will be destroyed at that time in accordance with the disposition requirements below in Section 8 *Data Disposition*.
- (2) Data may be stored on non-portable media (e.g. Storage Area Network drives, virtual media, etc.) as part of a Contractor's existing, documented backup process for business continuity or disaster recovery purposes. If so, such media will be protected as otherwise described in this exhibit. If this media is retired while DOC Confidential Information still exists upon it, the data will be destroyed at that time in accordance with the disposition requirements below in Section 8 *Data Disposition*.

i. Cloud storage. DOC Confidential Information requires protections equal to or greater than those specified elsewhere within this exhibit. Cloud storage of Data is problematic as neither DOC nor the Contractor has control of the environment in which the Data is stored. For this reason:

- (1) DOC Data will not be stored in any consumer grade Cloud solution, unless all of the following conditions are met:
 - (a) Contractor has written procedures in place governing use of the Cloud storage and Contractor attests in writing that all such procedures will be uniformly followed.
 - (b) The Data will be Encrypted while within the Contractor network.
 - (c) The Data will remain Encrypted during transmission to the Cloud.
 - (d) The Data will remain Encrypted at all times while residing within the Cloud storage solution.
 - (e) The Contractor will possess a decryption key for the Data, and the decryption key will be possessed only by the Contractor and/or DOC.
 - (f) The Data will not be downloaded to non-authorized systems, meaning systems that are not on either the DOC or Contractor networks.
 - (g) The Data will not be decrypted until downloaded onto a computer within the control of an Authorized User and within either the DOC or Contractor's network.

- (2) Data will not be stored on an Enterprise Cloud storage solution unless either:
- (a) The Cloud storage provider is treated as any other Sub-Contractor, and agrees in writing to all of the requirements within this exhibit; or,
 - (b) The Cloud storage solution used is FedRAMP certified.
- (3) If the Data includes protected health information covered by the Health Insurance Portability and Accountability Act (HIPAA), the Cloud provider must sign a Business Associate Agreement prior to Data being stored in their Cloud solution.

6. System Protection. To prevent compromise of systems which contain DOC Data or through which that Data passes:

- a. Systems containing DOC Data must have all security patches or hotfixes applied within 3 months of being made available.
- b. The Contractor will have a method of ensuring that the requisite patches and hotfixes have been applied within the required timeframes.
- c. Systems containing DOC Data shall have an Anti-Malware application, if available, installed.
- d. Anti-Malware software shall be kept up to date. The product, its anti-virus engine, and any malware database the system uses, will be no more than one update behind current. These anti-malware practices must meet or exceed those described in NIST SP800-40.
- e. The architecture must provide continuous monitoring of both internal and external activity for anomalies and identify, report, and defend against security intrusions before data is compromised.
- f. Contractor shall conduct penetration tests at least once every 24 months, system vulnerability assessments at least monthly, and application vulnerability assessments prior to the production release of any changes to source code.
- g. Contractor has implemented application/system development practices consistent with the current version of NIST SP800-64 for low to moderate impact systems, and warrants the software does not contain any of the Open Web Application Security project (OWASP) top 10 vulnerabilities - https://www.owasp.org/index.php/Main_Page
- h. Contractor has a practice of systematic collection, monitoring, alerting, maintenance, retention, and disposal of security event logs and application audit trails. Logs and audit trails are written to an area inaccessible to system users and are protected from editing. At a minimum the logs and audit trails will provide historical details on all transactions within the system that are necessary to reconstruct activities. Including recording; type of event, date, time, account identification and machine identifiers for each logged transaction. Audit and log files can be analyzed by type in order to find emerging issues or trends. Contractor has settings triggering an immediate notification to appropriate system administrators for severe incidents. Logs are secured against unauthorized changes. At a minimum, logs must be retained for a period of 6 months.

7. Data Segregation.

- a. DOC Data must be segregated or otherwise distinguishable from non-DOC data. This is to ensure that when no longer needed by the Contractor, all DOC Data can be identified for return or destruction. It also aids in determining whether DOC Data has or may have been compromised in the event of a security breach. As such, one or more of the following methods will be used for data segregation.
- (1) DOC Data will be kept on media (e.g. hard disk, optical disc, tape, etc.) which will contain no non-DOC Data. And/or,
 - (2) DOC Data will be stored in a logical container on electronic media, such as a partition or folder dedicated to DOC Data. And/or,
 - (3) DOC Data will be stored in a database which will contain no non-DOC data. And/or,
 - (4) DOC Data will be stored within a database and will be distinguishable from non-DOC data by the value of a specific field or fields within database records.
 - (5) When stored as physical paper documents, DOC Data will be physically segregated from non-DOC data in a drawer, folder, or other container.
- b. When it is not feasible or practical to segregate DOC Data from non-DOC data, then both the DOC Data and the non-DOC data with which it is commingled must be protected as described in this exhibit.

8. Data Disposition. When the contracted work has been completed or when the Data is no longer needed, except as noted above in Section 5.b, Data shall be returned to DOC or destroyed. Media on which Data may be stored and associated acceptable methods of destruction are as follows:

Data stored on:	Will be destroyed by:
Server or workstation hard disks, or Removable media (e.g. floppies, USB flash drives, portable hard disks) excluding optical discs	Using a "wipe" utility which will overwrite the Data at least three (3) times using either random or single character data, or Degaussing sufficiently to ensure that the Data cannot be reconstructed, or Physically destroying the disk
Paper documents with sensitive or Confidential Information	Recycling through a contracted firm, provided the contract with the recycler assures that the confidentiality of Data will be protected.
Paper documents containing Confidential Information requiring special handling (e.g. protected health information)	On-site shredding, pulping, or incineration
Optical discs (e.g. CDs or DVDs)	Incineration, shredding, or completely defacing the readable surface with a coarse abrasive

Magnetic tape	Degaussing, incinerating or crosscut shredding
---------------	--

9. **Notification of Compromise or Potential Compromise.** Contractor shall implement incident response practices consistent with NIST SP 800-61. The actual compromise of DOC Data must be reported to the DOC Contact designated in the Contract within three (3) business days of discovery. If no DOC Contact is designated in the Contract, then the notification must be reported to the DOC Contracts and Legal Affairs office at docclacontracts@doc1.wa.gov. Contractor must also take actions to mitigate the risk of loss and comply with any notification or other requirements imposed by law or DOC.
10. **Data shared with Subcontractors.** If DOC Data provided under this Contract is to be shared with a subcontractor, the Contract with the subcontractor must include all of the data security provisions within this Contract and within any amendments, attachments, or exhibits within this Contract. If the Contractor cannot protect the Data as articulated within this Contract, then the contract with the sub-Contractor must be submitted to the DOC Contact specified for this contract for review and approval.
11. **System Audit Requirements.** Contractor has completed a recent independent security audit by a SOC 2 Type 2 accredited firm of their development and operational practices, or that an independent security audit by an accredited firm will be completed within 6 months after contract execution. This audit must include vulnerability assessments, and penetration tests, and confirm compliance with the security requirements herein. The audit should include any specific data center facility where the service is deployed, and all failover facilities unless those facilities provide their own SOC 2 Type 2 audit.
12. **Disaster Recovery.** Contractor shall document, test and maintain a disaster recovery plan including an alternate facility to assure the system/service is recovered within 24 hours of a force majeure event. The recovery plan must protect against more than 24 hours of DOC data being lost.
13. **Records Maintenance.** The parties to this Agreement shall each maintain books, records, documents, and other evidence which sufficiently and properly reflect all direct and indirect costs expended by either party in the performance of the services described herein, if any. These records shall be subject to inspection, review, or audit by personnel of both parties, other personnel duly authorized by either party, the Office of the State Auditor, and federal officials so authorized by law. All books, records, documents, and other material relevant to this Agreement will be retained for six (6) years after expiration and the Office of the State Auditor, federal auditors, and any persons duly authorized by the parties shall have full access and the right to examine any of these materials during this period.
14. **Rights in Data.** Unless otherwise provided in this Agreement, this Agreement will not be construed to effect any transfer of right or license to the embodiments of the Washington DOC's Data, except to the limited extent necessary to carry out the responsibilities specified herein. Commercialization of DOC Category 3 or Category 4 data, or sharing of DOC data with third parties without the written permission of DOC is strictly prohibited under these terms.
15. **Insurance Requirements.** If this agreement involves the Contractor collecting, storing, creating, altering, processing, transmitting, routing, or handling any DOC Category 3 or Category 4 data, then Contractor shall obtain and maintain for the duration of the Contract, at Contractor's expense, the following insurance coverages which the parties agree are unaffected by any limitation of liability language within this Agreement.

a. Technology Professional Liability (errors and omissions)

The Contractor shall maintain Technology Professional Liability (errors and omissions) insurance, to include coverage of claims involving infringement of intellectual property. This shall include but is not limited to infringement of copyright, trademark, trade dress, invasion of privacy violations, information theft, damage to or destruction of electronic information, release of private information, alteration of electronic information, extortion, network security, regulatory defense (including fines and penalties), and notification costs. The coverage limits must be at least \$1,000,000 per covered claim without sublimit, and \$2,000,000 annual aggregate.

b. Crime and Employee Dishonesty

The Contractor shall maintain Employee Dishonesty and (when applicable) Inside/Outside Money and Securities coverages for property owned by the State of Washington in the care, custody, and control of Contractor, to include electronic theft and fraud protection. The coverage limits must be at least \$1,000,000 per covered claim without sublimit, \$2,000,000 annual aggregate.

c. Cyber Risk Liability Insurance

The Contractor shall maintain coverage for Cyber Risk Liability, including information theft, computer and data loss replacement or restoration, release of private information, alteration of electronic information, notification costs, credit monitoring, forensic investigation, cyber extortion, crises management, public relations expenses, regulatory defense (including fines and penalties), network security, and liability to third parties from failure(s) of contractor to handle, manage, store, and control personally identifiable information belonging to others. The policy must include full prior acts coverage. The coverage limits must be at least \$1,000,000 per covered claim without sublimit, \$2,000,000 annual aggregate.
