SUBJECT: Protocols for Transport, Property Management and Safety in Response to COVID-19

Although there have been some changes to operations as it relates to the monitoring of individuals in the community, UA/BA monitoring and field contacts, we understand there are individuals who are going to continue to violate conditions of electronic monitoring that will need to be addressed.

In an attempt to establish some clear protocols during this challenging time, we have collaborated with the Attorney General's Office, Washington Federation of State Employees (WFSE), and DOC Leadership to develop the following guidelines for transports and safety.

Transport Protocol

1. At the time of arrest and/or **prior** to transporting an individual to a DOC prison facility, the Corrections Specialist (CS) will:
 - Ask the individual the required COVID-19 active screening
2. If all of the responses to the active screening questions are **NO**, the CS will not need to contact the DOC Nurse Desk. If there are no local jail options, the CS will follow existing protocols for transfers back to prison.
 - **Note:** Those on electronic home monitoring would not go through the violator desk for this transport.
3. If there is a **YES** answer to any of the active screening questions, the CS will call the DOC Nurse Desk at 360-725-8733 to staff the case.
 - Assure appropriate safety protocols and use of Personal Protective Equipment (PPE) are followed while awaiting guidance.
 - i. Nurse Desk staff will contact a DOC medical practitioner for guidance on the management of patients when needed.

"Working Together for SAFE Communities"

- The Nurse Desk will determine which prison has bed availability depending on symptoms and inform the CS.
 - i. The Nurse Desk staff will contact the receiving facility's medical and/or nursing staff on incoming transport and provide a medical report.
 - ii. If the individual is symptomatic, CSs will utilize Prison Transport COs until such time staff receive appropriate PPE equipment. (Prison Transport Directive Attached)
- If the individual is taken into custody, Prison Transport officers will take the individual's temperature prior to allowing the individual to enter the vehicle.
- **Note:** Identify to the nurse's desk that these are inmates that need to be returned via transport. The CS will obtain a transfer order, per normal process. Please indicate on the transfer order if the participant is symptomatic.

Safety

The CS will:

- Maintain proper social distancing while pending nurse consultation and placement information;
- Wear gloves and a surgical mask;
- Place a surgical mask on the detained individual;

Transport Vehicle Sanitation Protocol

- All transport vehicles **WILL BE** disinfected at the end of each day and also during the course of the day between transports in the event the vehicle is empty.
 - This means that if you are transporting to a location and then are scheduled to pick up at another location, the van will be disinfected prior to placing individual in the transport vehicle.
 - Disinfecting the transport vehicle should consist of wiping all hard surfaces (door handles, arm rests, seat belts, and partitions etc.) with Clorox/Lysol/Bleach wipes. If the vehicle contains hard seats, these should also be wiped down. If you have cloth seats, standard Lysol or other disinfectant spray should be used.
- All restraints **WILL BE** wiped down with Clorox/Lysol/Bleach or other disinfectant spray after each application and also at the end of the day.
- If you observe/believe the individual is symptomatic, the individual will have a mask applied during transport for precautionary measures. **NOTE:** This does not mean that they have the virus, but to avoid cross-contamination of any illness.
- A standard dust type mask is applicable in this situation. It does not require an N-95. The mask is to stop the airborne droplets if the individual sneezes or coughs.

If you have questions about these items or other concerns, please staff those questions with your supervisor and, if necessary, send them to the [DOC COVID19 mailbox](#) for response.

I urge you to take care of yourself and your family during this time that is challenging all of us. Your personal safety and wellness are important.

Protocols for Transport, Property Management and Safety in Response to COVID-19

Subject: CCD Violators - Transport Directive
Date: Friday, March 6, 2020 4:28:58 PM

In the event a CCD violator (after arrest) is taken to a community health facility and the individual is determined to be suspected or confirmed COVID-10 positive **as determined by a medical practitioner**, the CCO will notify the HQ Nurse Desk per standard protocol.

Due to the COVID-19 Guidelines version 3-6-2020 sent to all HS and Prisons staff, **Prisons correctional officers** will be required to transport the violator from the medical facility/jail to a DOC facility as directed by the Nurse Desk.

This immediate change in practices is required to be in compliance with the COVID-19 guidelines which require respirators and disposal suits and additional protections for transportation purposes. CCD is not currently equipped with the necessary items and CCD employees are not currently respirator qualified.

Again, this is only for those violators whom a medical practitioner has determined to be suspected or confirmed COVID-19 as communicated to the HQ Nurse Desk.

Tomas P. Fithian
